Exercise29 (M)

Write a program that creates a structure, where one can save name and phone number. Program will ask for the user to input name and phone number (and insert them to the structure) and then prints out the given name and phone number from the structure.

Exercise30 (M)

Write a program that asks user for five persons name and phone number and saves them to structures. Every structure has to have index number in them as well, that is assigned automatically. After the names and phone numbers are given, program will print out all the index numbers, names and phone numbers of the structures.

Exercise31 (E)

Continue from the previous exercise, but now user can define by index number from which of the structure name and phone number is printed (1st names and phone numbers are asked for, then program prints list of index numbers and then user can select which ones to print out).
